Preface

Do you need to get the "big picture" about Internet marketing? Then The Web Marketing Checklist is for you. It is designed to highlight all the major approaches to Internet marketing in brief scope so you can see what your choices are.

The follow article includes dozens of links to resources and more information -- much of it carefully organized on my website (and in some e-books) for further study, much of it entirely free. Please excuse the many links to my site. Feel free to use this whitepaper as a jumping-off-place to learn about the entire field of Internet marketing.

Cited in *PC Magazine*,
9/21/99, p. 36

The Web Marketing Checklist had its origin in 1997 and has been updated many times since then. It originally included 27 promotion approaches. Those have gradually expanded to 32 ideas.

I hope you find it useful as you explore the rapidly changing landscape of Internet marketing. Enjoy!

God bless you,
Dr. Ralph F. Wilson
Editor, *Web Marketing Today*

Table of Contents

Preface	2
Table of Contents	3
Search Engine Strategies	5
1. Write a Page Title.	5
2. Write a Description and Keyword META Tag.	6
3. Include Your Keywords in Header Tags H1, H2, H3	7
4. Make Sure Your Keywords Are in the First Paragraph of Your Body Text	7
5. Use Keywords in Hyperlinks	8
6. Make Your Navigation System Search Engine Friendly	8
7. Develop Several Pages Focused on Particular Keywords	8
8. Submit Your Webpage URL to Search Engines	9
9. Fine-tune with Search Engine Optimization	9
10. Promote Your Local Business on the Internet	10
Linking Strategies	10
11. Submit Your Site to Key Directories	10
12. Submit Your Site to Industry Sites and Specialized Directories	11
13. Request Reciprocal Links	11
14. Write Articles for Others to Use in their Newsletters	12
15. Begin a Business Blog	12
16. Issue News Releases	12
Traditional Strategies	13
17. Include Your URL on Stationery, Cards, and Literature	13
18. Promote using traditional media	13
19. Develop a Free Service	13
E-Mail Strategies	14
20. Install a "Signature" in your E-Mail Program	14
21. Publish an E-Mail Newsletter	14
22. Send Offers to Your Visitors and Customers	15
23. Rent targeted e-mail lists	15
Miscellaneous Strategies	15
24. Promote Your Site in Online Forums and Blogs	15
25. Announce a Contest	15

26. Ask Visitors to Bookmark Your Site	16
27. Exchange Ads with Complementary Businesses	16
28. Devise Viral Marketing Promotion Techniques	16
Paid Advertising Strategies	16
29. Buy a Text Ad in an E-Mail Newsletter	17
30. Begin an Affiliate Program	17
31. Purchase Pay Per Click (PPC) ads	17
32. List Your Products with Shopping Comparison Bots and Auction Sites	18
About the Author	19

How can you get more visitors to your website? What can you do to stimulate traffic? Here's a checklist of 32 items you need to consider. Many of these you're probably doing already; others you meant to do and forgot about; still others you've never heard of. Of course, a great deal has been written about this. You'll find links to thousands of articles on site promotion in our [Web Marketing Research Room](http://www.wilsonweb.com/research) (www.wilsonweb.com/research). While we're not breaking any new ground here, we've tried to summarize some of the most important techniques.

Search Engine Strategies

Perhaps the most important -- and inexpensive -- strategy is to rank high for your preferred words on the main search engines in "organic" or "natural" searches (as opposed to paid ads). Search engines send robot "spiders" to index the content on your webpage, so let's begin with steps to prepare your webpages for optimal indexing. The idea here is not to trick the search engines, but to leave them abundant clues as to what your webpage is about.

1. Write a Page Title.

Write a descriptive title for each page of 5 to 8 words. Remove as many "filler" words from the title, such as "the," "and," etc. This page title will appear hyperlinked on the search engines when your page is found. Entice searchers to click on the title by making it a bit provocative. Place this at the top of the webpage between the `<HEAD></HEAD>` tags, in this format: `<TITLE>Web Marketing Checklist -- 32 Ways to Promote Your Website</TITLE>`. (It also shows on the blue bar at the top of your web browser.)

Plan to use some descriptive keywords along with your business name on your home page. If you specialize in silver bullets and that's what people will be searching for, don't just use your company name "Acme Ammunition, Inc." use "Silver and Platinum Bullets -- Acme Ammunition, Inc." The words people are most likely to search on should appear first in the title (called "keyword prominence"). Remember, this title is nearly your entire identity on the search engines. The more people see that interests them in the blue hyperlinked words on the search engine, the more likely they are to click on the link.

2. Write a Description and Keyword META Tag.

The description should be a sentence or two describing the content of the webpage, using the main keywords and keyphrases on this page. If you include keywords that aren't used on the webpage, you could hurt yourself. Place the Description META Tag at the top of the webpage, between the <HEAD></HEAD> tags, in this format: Some search engines include this description below your hyperlinked title.

```
<META NAME="DESCRIPTION" CONTENT="Increase visitor hits, attract traffic through submitting URLs, META tags, news releases, banner ads, and reciprocal links">.
```

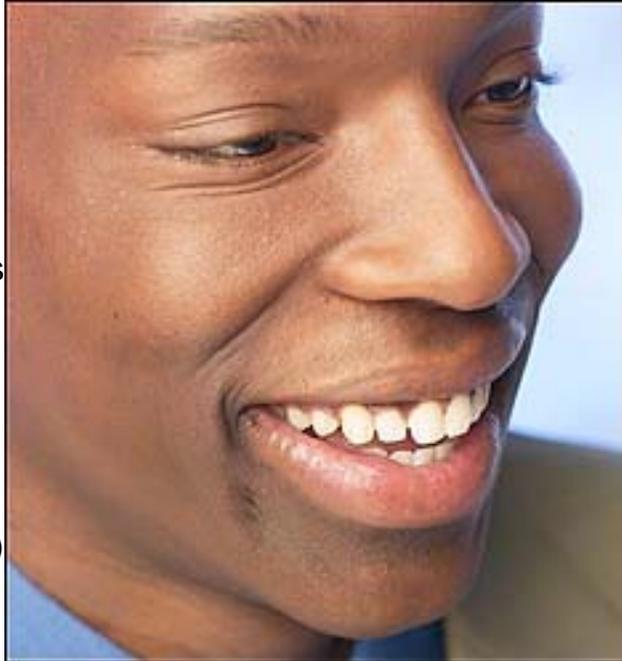

Your maximum number of characters should be about 255; just be aware that only the first 60 or so are visible on Google, though more may be indexed.

When I prepare a webpage, I write the article first, then write a description of the content in that article in a sentence or two, using each of the important keywords and keyphrases included in the article. This goes into the description META tag. Then for the keywords META tag, I strip out the common words, leaving just the meaty words and phrases. The keywords META tag is no longer

used for ranking by Google, but it is currently used by Yahoo, so I'm leaving it in. Who knows when more search engines will consider it important again? Every webpage in your site should have a title, and META description tag.

3. Include Your Keywords in Header Tags H1, H2, H3

Search engines consider words that appear in the page headline and sub heads to be important to the page, so make sure your desired keywords and phrases appear in one or two header tags. Don't expect the search engine to parse your Cascading Style Sheet (CSS) to figure out which are the headlines -- it won't. Instead, use keywords in the H1, H2, and H3 tags to provide clues to the search engine. (Note: Some designers no longer use the H1, H2 tags. That's a mistake. Make sure your designer defines these tags in the CSS rather than creating headline tags with other names.)

4. Make Sure Your Keywords Are in the First Paragraph of Your Body Text

Search engines expect that your first paragraph will contain the important keywords for the document -- where most people write an introduction to the content of the page. You don't want to just artificially stuff keywords here, however. More is not better. Google might expect a keyword density in the entire body text area of maybe 1.5% to 2% for a word that should rank high, so don't overdo it. Other places you might consider including keywords would be in ALT tags and perhaps COMMENT tags, though few search engines give these much if any weight.

5. Use Keywords in Hyperlinks

Search engines are looking for clues to the focus of your page. When they see words hyperlinked in your body text, they consider these potentially important, so [hyperlink your important keywords and keyphrases](#). To emphasize it even more, the webpage you are linking to could have a page name with the keyword or keyphrase, such as `blue-widget.htm` -- another clue for the search engine.

6. Make Your Navigation System Search Engine Friendly

Some webmasters use frames, but frames can cause serious problems with search engines. Even if search engines can find your content pages, they could be missing the key navigation to help visitors get to the rest of your site. JavaScript and Flash navigation menus that appear when you hover are great for humans, but search engines don't read JavaScript and Flash. Supplement them with regular HTML links at the bottom of the page, ensuring that a chain of hyperlinks exists that take a search engine spider from your home page to every page in your site. A site map with links to all your pages can help, too. If your site isn't getting indexed fully, make sure you submit a [Google Sitemap](#) following directions on Google's site (www.google.com/webmasters/sitemaps/login). Greg Tarrant's [Google Sitemap Generator and Editor](#) (www.sitemapdoc.com) is a free tool to build these. Be aware that some content management systems and e-commerce catalogs produce dynamic, made-on-the-fly webpages. You can sometimes recognize them by question marks in the URLs followed by long strings of numbers or letters. Overworked search engines sometimes stop at the question mark and refuse to go farther. If you find the search engines aren't indexing your interior pages, you might consider URL rewriting, a site map, and targeted content pages (see below). Commercial solutions include [Bruce Clay's Dynamic Site Mapping](#) (www.bruceclay.com/web_dsm.htm) and [YourAmigo.com's SpiderLinker](#) (www.youramigo.com)

7. Develop Several Pages Focused on Particular Keywords

Search Engine Optimization (SEO) specialists no longer recommend using external doorway or gateway pages, since nearly duplicate webpages might get you penalized. Rather, develop several webpages on your site, each of which is focused on a different keyword or keyphrase. For example, instead of listing all your services on a single webpage, try developing a separate webpage

for each. These pages will rank higher for their keywords since they contain targeted rather than general content. You can't fully optimize all the webpages in your site, but these focused-content webpages you'll want to spend lots of time tweaking to improve their rank.

8. Submit Your Webpage URL to Search Engines

Next, submit your homepage URL to the important Web search engines that robotically index the Web. Look for a link on the search engine for "Add Your URL." In the US, the most used search engines are: Google, Yahoo, MSN, AOL Search, and Ask.com. Some of these feed search content to the other main search engines and portal sites. For Europe and other areas you'll want to submit to regional search engines. It's a waste of money to pay someone to submit your site to hundreds of search engines. Avoid registering with FFA (Free For All pages) and other link farms. They don't work well, bring you lots of spam e-mails, and could cause you to be penalized by the search engines. We'll talk about submitting to directories under "Linking Strategies" below. If your page is already indexed by a search engine, don't re-submit it unless you've made significant changes; the search engine spider will come back and revisit it soon anyway.

9. Fine-tune with Search Engine Optimization

Now fine-tune your focused-content pages (described in point 7), and perhaps your home page, by making minor adjustments to help them rank high. Software such as [WebPosition](http://www.wilsonweb.com/afd/webposition.htm)

(www.wilsonweb.com/afd/webposition.htm) allows you to check your current ranking and compare your webpages against your top keyword competitors. I use it regularly. WebPosition's Page Critic provides analysis of a search engine's preferred statistics for each part of your webpage. You can do this yourself with

[WebPosition](http://www.wilsonweb.com/afd/clay_seotoolset.htm). The best set of SEO tools by far is [Bruce Clay's SEOToolSet](http://www.wilsonweb.com/afd/clay_seotoolset.htm) (www.wilsonweb.com/afd/clay_seotoolset.htm). You can find links to [hundreds of articles on search engine strategies](#) in our Research Room (www.wilsonweb.com/cat/cat.cfm?page=1&subcat=mp_Search). If you want more detail, consider purchasing my inexpensive book [Dr. Wilson's Plain-Spoken Guide to Search Engine Optimization](#)

(<http://www.wilsonweb.com/ebooks/seo.htm>). Many small and large businesses outsource search engine positioning because of the considerable time investment it requires. If you outline your needs, I can point you

the right direction to [SEO firms I know and trust](#)

(www.wilsonweb.com/recommendations/seo-services.htm).

10. Promote Your Local Business on the Internet

These days many people search for local businesses on the Internet. To make sure they find you include on every page of your website the street address, zip code, phone number, and the five or 10 other local community place names your business serves. If you can, include place names in the title tag, too. When you seek links to your site (see below), a local business should get links from local businesses with place names in the communities you serve *and* complementary businesses in your industry nationwide. For more information, see my book [How to Promote Your Local Business on the Internet](#)

(www.wilsonweb.com/ebooks/local.htm).

Linking Strategies

Links to your site from other sites bring additional traffic. But since Google and other major search engines consider the number of incoming links to your website ("link popularity") as an important factor in ranking, more links will help you rank higher in the search engines, too. Google has introduced a 10-point scale called PageRank (10 is the highest rank) to indicate the quantity and quality of incoming links. All links, however, are not created equal. Links from popular information hubs will help your site rank higher than those from low traffic sites. You'll find [links to articles on linking strategies](#) in our Research Room

(www.wilsonweb.com/cat/cat.cfm?page=1&subcat=mp_Linking).

11. Submit Your Site to Key Directories

Submit your site to key directories, since a link from a directory will help your ranking -- and get you traffic. Be sure to list your site in the free [Open Directory Project](#) (www.dmoz.com), overseen by overworked volunteer human editors. This hierarchical directory provides content feeds to all the major search engines. Plus it provides a link to your site from an information hub that Google deems important. But don't be impatient and resubmit or you'll go to the end of the queue.

Yahoo! Directory is another important directory to be listed in, though their search results recently haven't been featuring their own

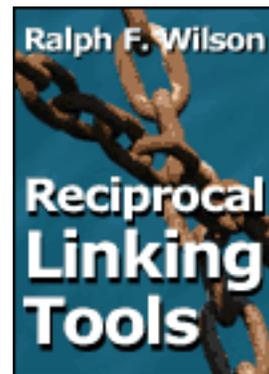

directory as prominently. Real humans will read (and too often, pare down) your 200-character sentence, so be very careful and [follow their instructions](#) (<http://docs.yahoo.com/info/suggest/>). Hint: Use somewhat less than the maximum number of characters allowable, so you don't have wordy text that will tempt the Yahoo! editor to begin chopping. Business sites require a \$299 annual recurring fee for [Yahoo! Express](#) to have your site considered for inclusion within seven business days (<http://docs.yahoo.com/info/suggest/busexpress.html>). Other directories to consider might be [About.com](#) and [Business.com](#).

12. Submit Your Site to Industry Sites and Specialized Directories

You may find some directories focused on particular industries, such as education or finance. You probably belong to various trade associations that feature member sites. Ask for a link. Even if you have to pay something for a link, it may help boost your PageRank. Beware of directories that solicit you for "upgraded listings." Unless a directory is widely used in your field, your premium ad won't help -- but the link itself will help boost your PageRank and hence your search engine ranking. Marginal directories come and go very quickly, making it hard to keep up. Don't try to be exhaustive here.

13. Request Reciprocal Links

Find complementary websites and request a reciprocal link to your site (especially to your free service, if you offer one). Develop an out-of-the-way page where you put links to other sites -- so you don't send people out the back door as fast as you bring them in the front door. Your best results will be from sites that get a similar amount of traffic to your site. High-traffic site webmasters are too busy to answer your requests for a link and don't have anything to gain. Look for smaller sites that may have linking pages.

Check out Ken Evoy's free [SiteSell Value Exchange](#). It (1) registers your site as one that is willing to exchange links with other sites that have a similar theme/topic content and (2) searches for sites with similar topical content (<http://sales.sitesell.com/value-exchange/>). Additionally, two automated link building software programs stand out -- [Zeus](#) and [Arelis](#). These search for complementary sites, help you maintain a link directory, and manage reciprocal links. However, use these

programs to identify the complementary sites, *not* to send impersonal automated e-mail spam to site owners. When you locate sites, send a personal e-mail to the administrative contact found in the [Whois Directory](http://www.networksolutions.com/whois/) (www.networksolutions.com/whois/). If e-mail doesn't get a response, try a phone call. I've written a brief e-book on [Reciprocal Linking Tools](http://www.wilsonweb.com/ebooks/linkingtools.htm) outlining various linking strategies and other software you can use to make the task easier. (www.wilsonweb.com/ebooks/linkingtools.htm) One warning: Be sure to only link to complementary sites, no matter how often you are bombarded with requests to exchange links with a mortgage site that has nothing to do with yours. One way Google determines what your site is about is who you link to and who links to you. It's not just links, but quality links you seek.

14. Write Articles for Others to Use in their Newsletters

You can dramatically increase your visibility when you write articles in your area of expertise and distribute them to editors as free content for their e-mail newsletters or their websites. Just ask that a link to your website and a one-line description of what you offer be included with the article. This is an effective "viral" approach that can produce hundreds of links to your site over time.

15. Begin a Business Blog

Want links to your site? Begin a business blog on your website, hosted on your own domain. If you offer excellent content and regular industry comment, people are likely to link to it, increasing your site's PageRank. Learn more about business blogs in our [Research Room](http://www.wilsonweb.com/cat/cat.cfm?page=1&querytype=category&subcat=ms_Blogs). (www.wilsonweb.com/cat/cat.cfm?page=1&querytype=category&subcat=ms_Blogs). If you have a blog on a third-party blog site, occasionally find reasons to talk about and link to your own domain.

16. Issue News Releases

Find newsworthy events and send news releases to print and Web periodicals in your industry. The links to your site in online news databases may remain for years and have some clout with link popularity. However, opening or redesigning a website is seldom newsworthy these days. You may want to use a Web news release service such as [PR Web](http://wilsonweb.prwebdirect.com) (http://wilsonweb.prwebdirect.com). Placing your website URL in online copies of your press release may increase link popularity some. [More info on PR](#) is available in our Research Room. (www.wilsonweb.com/cat/cat.cfm?page=1&subcat=mp_PR) Issuing press releases is a traditional promotional strategy, but there are other traditional approaches that can help you as well.

Traditional Strategies

Just because "old media" strategies aren't on the Internet doesn't mean they aren't effective. A mixed media approach can be very effective.

17. Include Your URL on Stationery, Cards, and Literature

This is a no-brainer that is sometimes overlooked. Make sure that all reprints of cards, stationery, brochures, and literature contain your company's URL. And see that your printer gets the URL syntax correct. In print, I recommend leaving off the http:// part and including only the www.domain.com portion.

18. Promote using traditional media

Don't discontinue print advertising that you've found effective. But be sure to include your URL in any display or classified ads you purchase in trade journals, newspapers, yellow pages, etc. View your website as an information adjunct to the ad. Use a two-step approach: (1) capture readers' attention with the ad, (2) then refer them to a URL where they can obtain more information and perhaps place an order. Look carefully at small display or classified ads in the back of narrowly-targeted magazines or trade periodicals. Sometimes these ads are more targeted, more effective, and less expensive than online advertising. Consider other traditional media to drive people to your site, such as direct mail, classifieds, post cards, etc. TV can be used to promote websites, especially in a local market.

19. Develop a Free Service

It's boring to invite people, "Come to our site and learn about our business." It's quite another to say "Use the free kitchen remodeling calculator available exclusively on our site." Make no mistake, it's expensive in time and energy to develop free resources, such as our [Research Room](http://www.wilsonweb.com/cat/), but it is very rewarding in increased traffic to your site. Make sure that your free service is closely related to what you are selling so the visitors you attract will be good prospects for your business. Give visitors multiple opportunities and links to cross over to the sales part of your site.

E-Mail Strategies

Don't neglect e-mail as an important way to bring people to your website. Just don't spam. That is, don't send bulk unsolicited e-mails without permission to people with whom you have no relationship.

You can find lots to details and tips in my book **[The E-Mail Marketing Handbook](http://www.wilsonweb.com/ebooks/handbook.htm)** (www.wilsonweb.com/ebooks/handbook.htm).

20. Install a "Signature" in your E-Mail Program

This helps potential customers get in touch with you. Most e-mail programs such as AOL, Netscape, and Outlook allow you to designate a "signature" to appear at the end of each message you send. Limit it to 6 to 8 lines: Company name, address, phone number, URL, e-mail address, and a one-phrase description of your unique business offering. Look for examples on e-mail messages sent to you.

21. Publish an E-Mail Newsletter

While it's a big commitment in time, publishing a monthly e-mail newsletter ("ezine") is one of the very best ways to keep in touch with your prospects, generate trust, develop brand awareness, and build future business. It also helps you collect e-mail addresses from those who visit your site but aren't yet ready to make a purchase. Ask for an e-mail address and first name so you can personalize the newsletter. You can distribute your newsletter using listservers such as:

- **[Constant Contact](http://www.wilsonweb.com/afd/roving.htm)** (www.wilsonweb.com/afd/roving.htm)
- **[Got Marketing Campaigner](http://www.wilsonweb.com/afd/gotmarketing.htm)** (www.wilsonweb.com/afd/gotmarketing.htm)
- **[AWeber](http://www.wilsonweb.com/afd/aweber.htm)** (www.wilsonweb.com/afd/aweber.htm)
- **[Topica Email Publisher](http://www.wilsonweb.com/afd/topica.htm)** (www.wilsonweb.com/afd/topica.htm)
- **[Gammadyne Mailer](http://www.wilsonweb.com/afd/gammadyne.htm)** (www.wilsonweb.com/afd/gammadyne.htm)

If you're just getting started you can use a free advertising-supported newsletter from **[Yahoo! Groups](http://www.yahogroups.com)** (www.yahogroups.com). See **[articles on](#)**

[newsletter marketing](#) in our Research Room

(www.wilsonweb.com/cat/cat.cfm?page=1&subcat=me_Newsletter).

22. Send Offers to Your Visitors and Customers

Your own list of customers and site visitors who have given you permission to contact them will be your most productive list. Send offers, coupon specials, product updates, etc. Personalizing the subject line and the message may increase the results. You'll find scores of articles on [general e-mail marketing](#) in our Research Room (www.wilsonweb.com/cat/cat.cfm?page=1&subcat=me_Email-Gen).

23. Rent targeted e-mail lists

We abhor "spam," bulk untargeted, unsolicited e-mail, and you'll pay a very stiff price in a ruined reputation and cancelled services if you yield to temptation here. But the direct marketing industry has developed targeted e-mail lists you can rent -- lists consisting of people who have agreed to receive commercial e-mail messages. These lists cost \$40 to \$400 per thousand or 4¢ to 40¢ per name. Do a smaller test first to determine the quality of the list. Your best bet is to find an e-mail list broker to help you with this project -- you'll save money and get experienced help for no additional cost. You'll find many [articles on opt-in e-mail marketing](#) in our Research Room (www.wilsonweb.com/cat/cat.cfm?page=1&subcat=me_Opt-in).

Miscellaneous Strategies

24. Promote Your Site in Online Forums and Blogs

The Internet offers thousands of very targeted e-mail based discussion lists, online forums, blogs, and Usenet news groups made up of people with very specialized interests. Use [Google Groups](#) to find appropriate sources (groups.google.com). Don't bother with news groups consisting of pure "spam." Instead, find groups where a serious dialog is taking place. Don't use aggressive marketing and overtly plug your product or service. Rather, add to the discussion in a helpful way and let the "signature" at the end of your e-mail message do your marketing for you. People will gradually get to know and trust you, visit your site, and do business with you. You can learn more from [articles in our Research Room](#) (www.wilsonweb.com/cat/cat.cfm?page=1&subcat=mm_Newsgroups).

25. Announce a Contest

People like getting something free. If you publicize a contest or drawing available on your site, you'll generate more traffic than

normal. Make sure your sweepstakes rules are legal in all states and countries you are targeting. Prizes should be designed to attract individuals who fit a demographic profile describing your best customers. See dozens of [articles on contests and incentives](#) in our Research Room (www.wilsonweb.com/cat/cat.cfm?page=1&subcat=ma_Incentives).

26. Ask Visitors to Bookmark Your Site

It seems so simple, but make sure you ask visitors to [bookmark](#) your site or save it in their Favorites list. (www.wilsonweb.com/wmta/bookmark.htm)

Why don't you bookmark the article you're reading right now?

You know you'll want to find it again soon.

27. Exchange Ads with Complementary Businesses

Banner exchange programs don't work well these days. But consider exchanging e-mail newsletter ads with complementary businesses to reach new audiences. Just be sure that your partners are careful where they get their mailing list or you could be in trouble with the CAN-SPAM Act.

28. Devise Viral Marketing Promotion Techniques

So-called viral marketing uses the communication networks (and preferably the resources) of your site visitors or customers to spread the word about your site exponentially. Word-of-mouth, PR, creating "buzz," and network marketing are offline models. #14 above, "Write Articles for Others to Use in their Newsletters," is a viral approach. The classic example is the free e-mail service, hotmail.com, that includes a tagline about their service at the end of every message sent out, so friends tell friends, who tell friends. You can learn more in my e-book [Demystifying Viral Marketing](#) (\$12). You can find [articles on viral marketing](#) in our Research Room (www.wilsonweb.com/cat/cat.cfm?page=1&subcat=mm_Viral).

Paid Advertising Strategies

None of the approaches described above is "free," since each takes time and energy. But if you want to grow your business more rapidly, there comes a point when you need to pay for increased traffic. Advertising is sold in one of three ways: (1) traditional CPM (cost per thousand views), (2) pay per click (PPC), and (3) pay per action, otherwise known as an affiliate program or lead generation program. Do some small tests first to determine response. Then calculate your

return on investment (ROI) before spending large amounts. Here are some methods:

29. Buy a Text Ad in an E-Mail Newsletter

Some of the best buys are small text ads in e-mail newsletters targeted at audiences likely to be interested in your products or services. Many small publishers aren't sophisticated about advertising and offer attractive rates. For example, we offer low-priced [2-Line Ads](#) in *Web Marketing Today* each week (www.wilsonweb.com/ads/2-line-ad.htm). Banner ads get such a low click-through rate (0.2%) these days that I don't recommend paying much for them. Banner ads typically cost about 50¢ to \$1 per thousand page views.

30. Begin an Affiliate Program

Essentially, a retailer's affiliate program pays a commission to other sites whose links to the retailer result in an actual sale. The goal is to build a network of affiliates who have a financial stake in promoting your site. If you're a merchant you, need to (1) determine the commission you are willing to pay (consider it your advertising cost), (2) select a company to set up the technical details of your program, and (3) promote your program to get the right kind of affiliates who will link to your site. Consider affiliate management software. More info in our [Research Room](#) (www.wilsonweb.com/cat/cat.cfm?page=1&subcat=em_Associate). You can see current software reviewed in my book [Report on Affiliate Marketing Software 2005](#) (www.wilsonweb.com/ebooks/affilisoft.htm)

31. Purchase Pay Per Click (PPC) ads

Purchase PPC ads with [Yahoo Search Marketing](#) (formerly Overture) (www.wilsonweb.com/afd/overture.htm) and [Google AdWords](#) (<https://adwords.google.com/select/>). The top ads appear as featured links to the right of "natural" search engine results for your keywords. Your ranking is determined by how much you've bid for a particular search word compared to other businesses. This can be a cost-effective way to get targeted traffic, since you only pay when someone actually clicks on the link. An excellent e-book on PPC strategies is Andrew Goodman's [21 Ways to Maximize Profits on Google AdWords](#) (www.wilsonweb.com/afd/pagezero.htm). [More information on PPC ads](#) can

be found in our Research Room (www.wilsonweb.com/cat/cat.cfm?page=1&subcat=mp_PPC). Pay Per Click advertising can be quite cost-effective when you learn how to use it. Yahoo Search Marketing even offers some [free credit](#) to get you started. (www.wilsonweb.com/afd/overture.htm). You can learn about software to administer such programs in my [Report on PPC Bid Management Software](#) (www.wilsonweb.com/ebooks/bidmgt.htm).

32. List Your Products with Shopping Comparison Bots and Auction Sites

Shopping bots compare your products and prices to others. Google's [Froogle](#) (www.froogle.com) is free, so be sure to list your products there. A Froogle listing also helps your product page's ranking on Google. Some work on a PPC basis: [mySimon](#) (www.mysimon.com), [BizRate](#) (www.bizrate.com), [PriceGrabber](#) (www.pricegrabber.com), and [Shopping.com](#) (www.shopping.com). Others expect a commission on the sale and sometimes a listing fee, especially sales systems that host the merchant. These include [eBay](#) (www.ebay.com), [Yahoo! Shopping Auctions](#) (<http://auctions.shopping.yahoo.com>), [Amazon zShops, Marketplace, and Auctions](#) (<http://zshops.amazon.com>), and [Yahoo! Shopping](#) (<http://shopping.yahoo.com>). You pay to acquire first-time customers, but hopefully you can sell to them a second, third, and fourth time, too.

We certainly haven't exhausted ways to promote your site, but these will get you started. To effectively market your site, you need to spend some time adapting these strategies to your own market and capacity. Right now, why don't you make an appointment to go over this checklist with someone in your organization, and make it the basis for your new Internet marketing strategy?

If you've read through this entire article without subscribing to my free [Web Marketing Today](#) e-mail newsletter, here's your last chance. It's your best source to keep up with ways to enhance your Internet marketing. [Subscribe today](#).

About the Author

Dr. Ralph F. Wilson is widely recognized as one of the top international authorities in the area of Internet marketing. **Business Week** called his popular WilsonWeb.com website: "bar none the best e-commerce resource out there." **Business 2.0** profiled him as one of the savvy dot-com survivors. **The New York Times** named Dr. Wilson "among the best-known Internet Marketing publishers and consultants who preach the responsible use of e-mail for marketing."

Dr. Ralph F. Wilson
E-Business Expert

He is the founding editor of *Web Marketing Today*®, the grandfather of the Internet marketing e-zines, published continuously since 1995. His *Web Marketing Today Premier Edition* is considered one of the top sources in the industry for in-depth content.

He is a winner of the **Tenagra Award for Internet Marketing Excellence** and the author of hundreds of articles and numerous books, including **Planning Your Internet Marketing Strategy** (John Wiley & Sons, 2002), **The E-Mail Marketing Handbook** (2005), and **The Shopping Cart Report** (2004).

Dr. Wilson speaks widely in the US and abroad. His one-day seminars, such as the **Internet Marketing Best Practices Briefing**, have been held on university campuses all over the US. He holds three earned academic degrees and lives with his wife in Loomis, California.
